

Assignment 1 : Set up the Home page

For this assignment, you'll create the Home page for the Sports app. This Home page includes a navigation bar and some menu options for later assignments.

The Home page

Specifications

- Create an app that's based on the Model-View-Controller template. Then, edit the code that's provided by that template to create a Home page like the one shown above.
- Use a Razor layout to store elements that are common to all pages, such as the navigation bar and the footer.
- Use Bootstrap classes to format the HTML elements and to create the navigation bar.
- Mark all navigation bar items as active.

Please check the submission policy in the Getting Started module to see what all you need to submit.

Please Note: This assignment will be used as base for your next few assignments.
